Open to remote work, relocation, or regular travel · Languages: Italian (native), English (professional working proficiency)

PROFILE

More than fifteen years in software. I started as a developer and have always worked across the whole spectrum: code, architecture, client direction, and teams. For more than ten years I have led as well as built; for over five of them, technical direction was the core of the job: agreeing with clients how to proceed and which paths to take. I have worked with dozens of clients across sectors, from fashion and retail to banking and insurance, as well as system integrators and delivery partners. I am the technical voice with the client, from pre-sales estimates and proposals to steering meetings, and after go-live I stay accountable for production. I have run hiring interviews and evaluated people's performance and results.

EXPERIENCE

Engineering Manager & Technical Lead Stackhouse (Spindox group)

Sep 2024 – Present

- I own how the work is directed, planned, and delivered, and I still write the code.
- Lead squads of 3–6: roadmap, sprint planning, backlog prioritization, and retrospectives with product and client stakeholders.
- Set the technical direction (architecture, trade-offs, solution design) and the organizational one: scope, priorities, and who delivers what.
- Deliver ServiceNow solutions (SAM, ITSM, widgets, business rules, flows) on client and internal engagements.
- Develop production features with React, TypeScript, and REST integrations.
- Hold the quality bar through code review and pairing, and leave shared integration libraries so the next project does not start from zero.

Professional Services Lead & Technical Trainer Vivocha

Jul 2012 – Sep 2024

- Twelve years delivering for enterprise clients, from the developer who built the work to the lead who owned it.
- Worked across the full spectrum throughout, covering senior developer, project manager, technical lead, and trainer roles as each engagement required; for more than five years technical direction was the core of the role, deciding with clients how to proceed and which paths to take.
- Owned engagements from discovery to go-live: requirements, technical decisions, and the relationship with the client when scope or priority changed.
- Designed and implemented custom integrations and customer-facing web applications for enterprise clients across industries, including work with large delivery partners.
- Taught engineering teams around the world in hands-on workshops on JavaScript SDKs and REST APIs, delivered in English, so they could run what we had shipped.
- Stayed accountable after go-live, owning escalated production incidents, including SLA-critical ones.

Developer & University Intern Reilabs

2010 – 2012

- Built front-end and back-end features for a web analytics product, including REST data feeds and interactive KPI dashboards.
- Worked on metrics design and on page-load and database performance.

SKILLS

Software engineering: TypeScript, JavaScript, React, Angular, Node.js, MongoDB, HTML5, CSS3

Platforms & delivery engineering: ServiceNow (SAM, ITSM), REST APIs, Git & CI/CD, Performance Tuning

Engineering leadership: Technical Leadership, Client Direction, Stakeholder Management, Pre-sales & Estimates, Solution Design, Hiring & Performance Evaluation, Agile Delivery, Technical Training & Knowledge Transfer

SELECTED PROJECT

Enterprise Integrations & Widgets. Custom integrations for enterprise clients across industries, from scoping through delivery, plus embeddable chat and video-chat widgets with real-time messaging (JavaScript, Angular, Node.js, REST APIs).

EDUCATION

Bachelor of Science (B.Sc.) in Computer Science, University of Cagliari (2011)
